Yellow perch	White sucker
Chain pickerel	Hornpout (bullhead)
Minnows	Pumpkinseed
Creek chubsucker	sunfish

Physical Characteristics

Area - 128 acres

Temperatures:

Maximum depth - 8 feet

Surface - 77°F

8 feet - 76°F

Principal fisheries: Largemouth bass, yellow perch, chain pickerel, hornpout

Beaver Pond is a large, shallow water located at the southern base of Pleasant Mountain. Its shorelines are lightly developed and the pond has a remote atmosphere. This pond is managed for existing warmwater species.

The pond is homothermous and summer water quality conditions are unsuitable for coldwater gamefish. Largemouth bass were introduced by the MDIFW in 1960, and they now provide a self-sustaining fishery. Perch, pickerel, and bullhead also provide plenty of angling opportunity.

The pond is accessed by dirt roads off from Lake Road; however, access is restricted to permissive trespass. Purchasing and developing access is a continuing priority of this department.

Surveyed - 1962
